

OMEGA PACK and Si-20, under and inside the unit pumps

Chevry Cossigny, France – 16.03.16

The Sauermann range of condensate removal pumps welcomes two new products intended for wall mounted air conditioning units: the Omega Pack, an under the unit pump, and the Si-20, an inside the unit pump.

The Omega Pack includes an Si-20 pump, a detection unit, all accessories required, and a shell in two parts. The soft design of this shell and its pure white color make it the perfect fit for the most recent AC units. Reversible, the shell can be installed on either side under the unit, right or left.

Most of the accessories are pre-installed to allow a quick and fast installation.

The brand new Si-20 pump is also available without the pack. Its slim design allows it to easily fit inside a mini-split air conditioner, but also alongside the unit (in lineset cover).

The Sauermann piston technology inside the Si-20 is specifically constructed for removing condensates from air conditioning systems. This technology makes the Si-20 fully reliable in any kind of environment.

The operating sound level of the Si-20 will remain extremely silent (22 dBA) whatever the amount of condensate. The Si-20 pump is fitted with unique rubber dampers designed to reduce noise caused by vibration.

The Si-20 is also fitted with a pre-installed Drain Safe Device, for a unique reliability in any kind of installation.

About Sauermann

Since 40 years, the Sauermann Group designs, manufactures and sells products and services dedicated to industrial and HVACR markets, focusing on the management of indoor air quality. We operate two main brands: KIMO for instruments aimed at measuring and monitoring air parameters and Sauermann for condensate removal pumps, accessories and solution kits.

Located on 3 continents (Europe, Asia and North America) with 19 sites, of which 4 are production plants, the group employs some 500 people. 50 engineers in R&D are continuously developing our technological know-how in electronics, hydraulics, plastic processing industry and firmware.
